INFORMED CONSENT FORM

****Prior to receiving care in this office, a health history and physical examination will be completed. These procedures are performed to assess your specific condition, your overall health, and in particular, your spinal health. These procedures will assist us in determining if chiropractic care is needed, or if any further examinations or studies are needed. In addition, they will help us determine if there is any reason to modify your care or provide you with a referral to another health care provider to treat your condition. All relevant findings will be reported to you along with a care plan prior to beginning care.**

Analysis / Examination / Treatment

As a part of the analysis, examination, and treatment, you are consenting to the following procedures (if/when clinically necessary): examination, palpation, vital signs, orthopedic testing, basic neurologic testing, range of motion testing, muscle strength testing, postural analysis, radiographic studies, ultrasound, cold laser, spinal decompression, manual traction, hot/cold therapy, electrical stimulation, mechanical traction, neuromuscular re-education, therapeutic exercises, trigger point therapy.

(NOTE: ONLY the procedures that are clinically indicated for your condition will be performed. The Doctor will recommend and discuss each procedure as applicable)

The material risks inherent in chiropractic treatment and the probability of those risks occurring:

As with any healthcare procedure, there are certain complications which may arise during chiropractic manipulation and therapy. These complications include, but are not limited to: fractures, disc injuries, dislocations, muscle strain, cervical myelopathy, costovertebral strains and separations, and burns. These complications are generally described as rare. Fractures are rare occurrences and generally result from some underlying weakness of the bone which we check for during the taking of your history, examination and X-ray (if needed). Some types of manipulation of the neck have been associated with injuries to the arteries in the neck leading to or contributing to serious complications, including stroke. The incidences of stroke are exceedingly rare and are estimated to occur between one in one million and one in five million cervical adjustments. Some patients will feel some stiffness and soreness following the first few days of treatment. We will make every reasonable effort during the examination to screen for contraindications to care; however, if you have a condition that would otherwise not come to our attention, it is your responsibility to inform us.

The availability and nature of other treatment options

Other treatment options for your condition may include:

- Self-administered, over-the-counter analgesics and rest
- Medical care and prescription drugs such as anti-inflammatory, muscle relaxants and pain-killers
- Hospitalization
- Surgery

If you chose to use one of the above noted "other treatment" options, you should be aware that there are risks and benefits of such options and you may wish to discuss these with your primary medical physician.

The risks and dangers to leaving conditions untreated

Conditions left untreated may allow the formation of adhesions and reduce mobility which may set up a pain reaction further reducing mobility. Your condition may continue to deteriorate or worsen. Over time this process may complicate treatment making it more difficult and less effective the longer it is postponed.

I have read the above explanation of the chiropractic adjustment and related treatment. I have discussed it with the Doctor and have had my questions answered to my satisfaction. By signing below I state that I have weighed the risks involved in undergoing treatment and have decided that it is in my best interest to undergo the treatment recommended. Having been informed of the risks, I hereby give my consent to the above aforementioned treatment(s).
